DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14 and 20-30, drawn to a method for establishing and effecting a secure synchronized browsing session incorporating encryption, classified in class 705, subclass 51.
 - II. Claims 15-19 and 32, drawn to a method and a computer readable medium having a data structure for establishing live agent assistance, classified in class 379, subclass 265.
 - III. Claim 31, drawn to a method for determining whether access to content is permitted, classified in class 709, subclass 217.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as establishing and effecting a secure browsing session for web content between a guide terminal and a follower terminal. Invention II has separate utility such as establishing and providing live agent assistance from a live agent at a first terminal to a customer at a second terminal. Invention III has separate utility such as determining whether access to content is permitted or not. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
